Proposal format and template files:

ProjectReportTemplate.zip (https://webcourses.ucf.edu/courses/1522566/files/124715228?wrap=1) (LaTex template)

PaperTemplate.docx (https://webcourses.ucf.edu/courses/1522566/files/124715230?wrap=1)

This is the hard deadline for the final report submission. There will NOT be any extension. The instructor needs a lot of time read and grade the report and provide feedback.

Please follow the guidelines carefully!

Proposal general guidelines (please follow these clearly):

[!!!!! Important !!!!!] All the team members in a team should submit the same proposal report file for grading purpose. Otherwise, it will be treated as a missing assignment!

Each team must submit a concise project proposal describing its planned semester project.

Length: 1–2 pages, excluding references
Format: PDF
References: Cite approximately 3–5 closely related papers

Your proposal should include:

1. **Project title and team members**
2. **Problem and motivation**
   - What is the task?
   - What are the inputs and expected outputs?
   - Why is the problem important and challenging?
3. **Related work and research gap**
   - Briefly summarize relevant methods.
   - Explain what limitation or open question your project will investigate.

4. **Proposed method**
    - Describe the planned model or pipeline.
    - Identify the pretrained models, adaptation methods, or agentic components you expect to use.
    - A simple conceptual figure is encouraged.
5. **Dataset and experiments**
    - Identify the datasets, baselines, data splits, and evaluation metrics.
    - Describe the principal comparisons or ablation studies.
6. **Novelty**
    - Explain what will go beyond reproducing an existing method.
7. **Feasibility and fallback plan**
    - Consider data availability, computing requirements, and technical risks.
8. **Timeline and responsibilities**
    - List major milestones and the **anticipated responsibilities of each team member**.

A strong proposal should define a clear and measurable research question, use appropriate baselines and evaluation metrics, connect with course topics, and be feasible within one semester. The proposal is a research plan and may be refined after receiving instructor feedback.

You will also use the proposal to develop the final project report.
